

STRENGTHENING THE MANAGEMENT, STORAGE AND TRANSPORT OF MERCURY: PERU'S WORLD LEADING PROGRESS

One of the most important challenges for the progressive reduction of emissions and releases of mercury is the assurance of its traceability, related to storage, handling, temporary transport, and the consequent environmentally sound management throughout its life cycle, considering economic and practical solutions. In the Peruvian case, strategic alliances, through different projects (USAID Prevent, the Secretariat of the Minamata Convention, Artisanal Gold Council (AGC) and GEF projects - planetGOLD Peru and GIRH TDPS -), have been the key to articulating and improving actions to strengthen the mercury management: In this webinar, the participants will be able to obtain valuable contributions that can be a reference for countries that face similar challenges, as well as information about the potential of its regulation through legal technical instruments.

LIST OF SPEAKERS

- Milagros Verástegui Salazar, MINAM
- Jhoana Estrella Dayan Canchanya Melchor, MINAM
- Peter Maxson, AGC
- Daniel Merino, AGC
