INFORMATION SESSION: THE GLOBAL E-WASTE CHALLENGE

Organized by Switzerland (Federal Office for the Environment) and Ghana (Environment Protection Agency). [Register here.](#)

Mercury waste, including mercury in e-waste is an issue that touches on each country individually, and collectively once it is transported outside of its territory. The event will allow to debate the role of the Basel Convention in addressing the global e-waste challenge, including the opportunities and challenges that come with the Basel Convention e-waste amendment proposal of Ghana and Switzerland for the upcoming COP15. The aim of the amendment is to increase transparency through the monitoring of all e-waste moved across borders, protect vulnerable countries from unwanted imports, better protect the environment and human health, ensure state of the art recovery, contribute to the circular economy and increase sustainability of the whole recycling chain.

MONDAY, 1 NOVEMBER 2021

17:45 – 18:45 CET
