## DESCRIPTION

This webinar presents the work carried out in the ASMG of Costa Rica as part of the NAP activities. One of the main objectives in ASMG is knowing the number of mining sites and size of the activity, since one of the challenges is their difficult access and in some cases dangerousness. In this way, the use of drones becomes a novel tool to develop an inventory and obtain additional information such as quantification of mining waste, distribution, change in land use, among others.

## SPEAKERS

- **María del Mar Solano T**  
Department of Environmental Quality Management  
Ministry of Environment and Energy  
14 years of experience in chemical substance management
